

Your firm. One connected service.

From the first question to the final follow-up.

A website and one role-based app for clients,
lawyers and the firm.

[Explore the interactive experience →](#)

CLIENT

LAWYER

FIRM

Three roles. One continuous relationship.

The website starts the relationship. The workspaces carry it forward.

01

Clients

Choose a service, arrange a consultation, prepare documents and understand the next step.

02

Lawyers

Manage availability, prepare for appointments, record outcomes and follow through.

03

The firm

Coordinate people, assignments, payments and service quality from one operating view.

Product scope: website + Android/iOS app + firm administration. Current release: an interactive browser demonstration.

A clear owner at every handover.

One consultation record connects the request, appointment, documents and follow-up.

Assignment before payment is the proposed sequence. The firm must approve it alongside hourly billing and reservation rules.

Know what happens next.

Appointments, documents and advice stay connected without repeating the same content on every tab.

Get started

Mobile sign-in, editable contact details and service selection.

Prepare with confidence

Appointment details, assigned lawyer and requested documents.

Stay informed

Booking, payment and assignment updates; a shared summary after consultation.

THE CLIENT'S NEXT STEP

Appointment confirmed

Prepare documents → Meet your lawyer
→ Read the summary → Complete
agreed actions

Workflow illustration

Prepare once. Carry the advice forward.

The lawyer workspace is organised around the work, not a repeated dashboard.

Before

Schedule & prepare

Offer available times. Open assigned appointments, client context and requested documents.

During

Consult & record

Start the consultation, record internal notes and submit the outcome for office review.

After

Summarise & follow up

Publish the client summary separately, agree the next action and retain consultation history.

Diary • Matters • Document review • Follow-ups • Availability

Run the service, not just the inbox.

The administration experience covers people, coordination and a view of firm activity.

People

Add and manage users and lawyers, specializations, photos and activation.

Coordination

Assign or reassign work, monitor progress and manage follow-up and closure.

Oversight

Review sample collections, service demand and consultations by stage.

MANAGEMENT QUESTIONS

What needs assignment?

Where is work waiting?

Which services are in demand?

What has been collected?

Share the advice. Control the internal record.

The consultation links the documents, but does not make every note client-visible.

01

Client documents

Upload and maintain Word, PDF and JPEG files against the booking. Track requests and review progress.

02

Internal outcome

The assigned lawyer records working notes and the outcome for authorised firm users.

03

Shared summary

The client receives a separate summary, agreed actions and any follow-up requirement.

Production delivery requires private file storage, server-enforced access, retention rules and auditable changes.

Agree the commercial journey before launch.

The original proposal includes both booking payment and an hours-based payment after consultation.

AT BOOKING

Deposit or full fee?

Define when the slot is reserved and how long the client has to pay.

AFTER CONSULTATION

Time, rate and balance

Agree duration approval, rounding and how earlier payments are reconciled.

Also decide: supported currencies • cancellations and refunds • no-shows • paid follow-ups. No live charges in the demo.

Useful improvements around the core service.

OTP, profile editing, payments and account management were already requirements. These are additional workflow improvements.

01 Guided service selection

Help uncertain visitors reach a suitable consultation.

02 Separate client summaries

Keep internal outcomes distinct from client-facing advice.

03 Document preparation

Request missing items and track versions and review status.

04 Controlled follow-through

Link follow-up work, approve rescheduling and check closure readiness.

From demonstration to daily operation.

The published experience lets the firm review journeys; it does not yet run real consultations.

Now

Review the experience

Role-based journeys, sample records, mock checkout and OTP, profile editing, people management and activity charts.

Build

Connect real services

Shared database, private files, secure accounts, SMS, payment gateway, Meet links and reliable push reminders.

Complete

Finish operating controls

Hourly settlement, currencies, holidays and booking cut-offs, password management, reports and Excel exports.

Native Android/iOS delivery, app-store release and production device testing remain ahead. No launch date or price is committed here.

The decisions that shape delivery.

Confirm these rules before detailed implementation and commercial estimation.

Fees & settlement

Who sets prices? Deposit or full fee? How are hours and balances approved?

Booking & availability

Who chooses the lawyer? Which status changes need admin approval?

Service policies

Cancellation, rescheduling, no-shows, paid follow-up and reservation expiry.

Client markets

Countries, phone codes, currencies and settlement requirements.

Access & records

Who sees notes and files? What changes after reassignment? Retention rules.

Firm identity & launch

Branding, lawyer credentials, support number, accounts and initial users.

Approve the service. Validate the operation.

Progress is measured by complete journeys, not by the number of screens.

01

Confirm scope

Review this deck and the interactive journeys. Resolve the firm decisions and approve the requirements.

02

Validate end to end

Test booking, payment outcomes, private documents, role access, reminders and follow-up with connected services.

03

Prepare launch

Complete device testing, firm-user acceptance, backups, monitoring, training and support arrangements.

Client access & booking

Original proposal: page 8 • Current demonstration versus remaining delivery

REQUIREMENT	CURRENT DEMONSTRATION	REMAINING DELIVERY
Mobile signup/login and SMS OTP	Mock verification flow	Real SMS and secure sessions
Profile: name, email and contact details	Editable local profile	Shared account storage
Home, services and lawyer name/experience	Sample service discovery	Firm details; lawyer experience content
Available consultations; date and time selection	Sample services and slots	Live availability and booking rules
Reason, additional notes and fee display	Captured in sample request	Approved fee rules
Confirmation, one payment gateway, booking details	Mock payment and booking record	Gateway and reliable payment updates
Confirmed, awaiting assignment, assigned, completed, follow-up, closed	Sample lifecycle	Confirm admin status authority

All rows remain in scope; a demonstration is not production completion.

Client appointments & records

Original proposal: page 9 • Current demonstration versus remaining delivery

REQUIREMENT	CURRENT DEMONSTRATION	REMAINING DELIVERY
Assigned lawyer, service, confirmed date/time	Shown on sample consultation	Server-backed assignments
Admin-added/generated Meet link; one-day reminder	Meeting placeholder only	Real link and scheduled reminders
Post-consultation pricing by hours; payment	Not implemented	Duration approval and settlement
Multiple Word/PDF/JPEG files tied to booking ID	Local document records	Actual upload and private storage
View, delete and replace files before consultation	Sample record controls	Real file access and lifecycle rules
Upcoming/completed consultations; booking history	Sample consultation history	Persistent cross-device history
Booking/payment/assignment/reminder push; support; logout	In-app alerts and demo sign-out	Background push; firm support number

All rows remain in scope; a demonstration is not production completion.

Lawyer access & consultation work

Original proposal: page 10 • Current demonstration versus remaining delivery

REQUIREMENT	CURRENT DEMONSTRATION	REMAINING DELIVERY
Admin-created login; profile; password change	Role selector; admin-managed details	Credentials, self-profile and password flow
Dashboard: today’s consultations	Sample priorities and diary	Live data and date-aware operations
Assigned client: contact, service, files, time, status	Sample assigned records	Server-enforced assignment access
Upcoming/past appointments; detail and notifications	Sample diary and in-app alerts	Reliable delivery and persistent history
View client documents; Meet date/time and reminders	Sample records and meeting details	Private files; real Meet/reminders
Start/in-progress, notes, complete, follow-up and next appointment	Sample workflow actions	Confirm status-change approvals
Submit consultation outcome to admin	Separate internal outcome	Authorised storage and audit trail

All rows remain in scope; a demonstration is not production completion.

Lawyer continuity & office access

Original proposal: page 11 • Current demonstration versus remaining delivery

REQUIREMENT	CURRENT DEMONSTRATION	REMAINING DELIVERY
Assigned-client history: appointments, documents, notes, statuses, follow-up	Sample linked records	Persistent history with access rules
Assignment, appointment, reminder, new-file and follow-up alerts	In-app event notifications	Reliable push and scheduled reminders
Lawyer logout	Demo sign-out	Secure session invalidation
Admin login with single access	Sample admin workspace	Secure admin account policy
Dashboard: registered users, lawyers, new bookings, pending assignment	People lists and selected metrics	Complete dashboard count set
Dashboard: today/upcoming/completed; total collection	Sample diary/status/payment views	Complete time-based metrics
Add/view/manage users; activate/deactivate	Local account management	Secure persistent administration

All rows remain in scope; a demonstration is not production completion.

Office people, services & scheduling

Original proposal: pages 11–12 • Current demonstration versus remaining delivery

REQUIREMENT	CURRENT DEMONSTRATION	REMAINING DELIVERY
Add/edit lawyer, specialization, photo, contacts, activation	Local lawyer management	Persistent profiles and private media
Lawyer assigned clients and consultation history	Sample assigned matters	Consolidated history and access policy
Service category, duration, fee, active/inactive	Fixed sample services	Service-management controls
Create/manage slots; block dates/times; holidays; cut-off	Lawyer sample availability	Admin scheduling policy and full controls
View bookings; assign/reassign; update status	Sample coordination workflow	Persistent operations and permissions
Create/add Meet; link/share to client and lawyer; date/time/reminders	Meeting placeholders	Real Meet integration and reminder jobs
User-wise document view/download	Booking-linked sample records	User-wise file access and downloads

All rows remain in scope; a demonstration is not production completion.

Office oversight & reporting

Original proposal: page 13 • Current demonstration versus remaining delivery

REQUIREMENT	CURRENT DEMONSTRATION	REMAINING DELIVERY
View all payments	Sample payment register	Gateway reconciliation and audit
Ongoing/completed work; lawyer updates and permitted notes	Sample consultation oversight	Server-side permissions
Track follow-up; close and reopen consultation	Linked sample follow-up and closure	Persistent audit and approved rules
Booking, assignment, meeting, reminder and follow-up push	In-app event alerts	Background push and reminder delivery
User, lawyer, booking and payment reports; Excel export	Sample charts; no full report suite	Reports and Excel export
Later direction: website + one Android/iOS role-based app	Responsive browser demonstration	Native apps and shared backend
Later direction: lawyer-managed availability; multiple currencies	Sample availability; INR-only amounts	Authority rules and currency support

All rows remain in scope; a demonstration is not production completion.
