

Your firm. One connected service.

From the first question to the final follow-up.

A website and one role-based app for clients,
lawyers and the firm.

[Explore the interactive experience →](#)

CLIENT

LAWYER

FIRM

Three roles. One continuous relationship.

The website starts the relationship. The workspaces carry it forward.

01

Clients

Choose a service, arrange a consultation, prepare documents and understand the next step.

02

Lawyers

Manage availability, prepare for appointments, record outcomes and follow through.

03

The firm

Coordinate people, assignments, payments and service quality from one operating view.

Product scope: website + Android/iOS app + firm administration. Current release: an interactive browser demonstration.

A clear owner at every handover.

One consultation record connects the request, appointment, documents and follow-up.

Assignment before payment is the proposed sequence. The firm must approve it alongside hourly billing and reservation rules.

Know what happens next.

Appointments, documents and advice stay connected without repeating the same content on every tab.

Get started

Mobile sign-in, editable contact details and service selection.

Prepare with confidence

Appointment details, assigned lawyer and requested documents.

Stay informed

Booking, payment and assignment updates; a shared summary after consultation.

THE CLIENT'S NEXT STEP

Appointment confirmed

Prepare documents → Meet your lawyer
→ Read the summary → Complete
agreed actions

Workflow illustration

The client journey, across both screens.

WEBSITE

APP PREVIEW

Choose a service → Book → Prepare → Attend → Read the summary → Follow up

Prepare once. Carry the advice forward.

The lawyer workspace is organised around the work, not a repeated dashboard.

Before

Schedule & prepare

Offer available times. Open assigned appointments, client context and requested documents.

During

Consult & record

Start the consultation, record internal notes and submit the outcome for office review.

After

Summarise & follow up

Publish the client summary separately, agree the next action and retain consultation history.

Diary • Matters • Document review • Follow-ups • Availability

The lawyer journey, from diary to follow-up.

My matters

Document review

Follow-ups

Availability

Set availability → Review → Consult → Record the outcome → Share advice → Follow up

Run the service, not just the inbox.

The administration experience covers people, coordination and a view of firm activity.

People

Add and manage users and lawyers, specializations, photos and activation.

Coordination

Assign or reassign work, monitor progress and manage follow-up and closure.

Oversight

Review sample collections, service demand and consultations by stage.

MANAGEMENT QUESTIONS

What needs assignment?

Where is work waiting?

Which services are in demand?

What has been collected?

The firm journey, from request to closure.

WEBSITE

APP PREVIEW

Review requests → Assign → Track progress → Review payments and outcomes → Close or reopen

Share the advice. Control the internal record.

The consultation links the documents, but does not make every note client-visible.

01

Client documents

Upload and maintain Word, PDF and JPEG files against the booking. Track requests and review progress.

02

Internal outcome

The assigned lawyer records working notes and the outcome for authorised firm users.

03

Shared summary

The client receives a separate summary, agreed actions and any follow-up requirement.

Production delivery requires private file storage, server-enforced access, retention rules and auditable changes.

Agree the commercial journey before launch.

The original proposal includes both booking payment and an hours-based payment after consultation.

AT BOOKING

Deposit or full fee?

Define when the slot is reserved and how long the client has to pay.

AFTER CONSULTATION

Time, rate and balance

Agree duration approval, rounding and how earlier payments are reconciled.

Also decide: supported currencies • cancellations and refunds • no-shows • paid follow-ups. No live charges in the demo.

Useful improvements around the core service.

OTP, profile editing, payments and account management were already requirements. These are additional workflow improvements.

01 Guided service selection

Help uncertain visitors reach a suitable consultation.

02 Separate client summaries

Keep internal outcomes distinct from client-facing advice.

03 Document preparation

Request missing items and track versions and review status.

04 Controlled follow-through

Link follow-up work, approve rescheduling and check closure readiness.

From demonstration to daily operation.

The published experience lets the firm review journeys; it does not yet run real consultations.

Now

Review the experience

Role-based journeys, sample records, mock checkout and OTP, profile editing, people management and activity charts.

Build

Connect real services

Shared database, private files, secure accounts, SMS, payment gateway, Meet links and reliable push reminders.

Complete

Finish operating controls

Hourly settlement, currencies, holidays and booking cut-offs, password management, reports and Excel exports.

Native Android/iOS delivery, app-store release and production device testing remain ahead. No launch date or price is committed here.

Approve the service. Validate the operation.

Progress is measured by complete journeys, not by the number of screens.

01

Confirm scope

Review this deck and the interactive journeys. Resolve the firm decisions and approve the requirements.

02

Validate end to end

Test booking, payment outcomes, private documents, role access, reminders and follow-up with connected services.

03

Prepare launch

Complete device testing, firm-user acceptance, backups, monitoring, training and support arrangements.
